The surface activity of aqueous solutions of a de-
mulsifying agent prepared from sulfonated vegetable
oils and termed "sum" was studied in connection with
demulsification of crude oil emulsions and compared
with that of a mixture of sodium salts of sulfo-
naphthalenic acids. The surface tension of solutions of
"sum" was found to decrease at the interface with air
with rise of the concentration of "sum" and to reach

A process is proposed for the production of powdered
sulfur with a better than 50% yield of particles under
0.1 mm granular size through the spraying of melted
sulfur by means of a pressure nozzle. The liquid
sulfur to be sprayed is atomized at a temperature
only a little above its melting point, preferably at a
temperature between 118-124°C, with the formation of
a spray cone in a chamber opened only in the direction
